New immunogenic Lawsonia FlgE peptide, its nucleic acid and antibody, useful in vaccines and diagnosis of Lawsonia infections, particularly in swine.

Claim 13; Page 87-90; 97pp; English.

The present sequence is the Lawsonia intracellularis flagellar hook protein F1gE. The present invention describes an isolated or recombinant polypeptide (1) that comprises, minics or cross-reacts with a B- or T-cell epitope of a F1gE (flagellar hook) polypeptide from a Lawsonia spp. (1) has antibacterial activity, and induces a specific humoral immune response. (1) are used as antigens in vaccines to prevent or treat infection by Lawsonia, in birds and animals, especially pigs, to raise specific antibodies (Ab) and to detect past or present infection. Ab are

```
also useful in diagnosis, to detect L. intracellularis or immunologically cross-reactive species, also for identification of epitopes in FlgE. Vectors that contain nucleic acids (II) encoding (I) are also useful in genetic vaccines, and fragments of (II) are useful as primers or probes for detecting L. intracellularis or related microorganisms, in hybridisation or amplification assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

A polypeptide (AAW16680) of Lawsonia intracellularis shows sequence similarity to flagellar basal body rod protein. Its amino acid sequence was deduced from a DNA molecule (AAT69204) obtd. by immunoscreening a Lintracellularis library using sera from vaccinated pigs. Polypeptides (AAW16678-85) of L. intracellularis are vaccine candidates for protection of birds and animals against intestinal diseases, esp. protection of pigs against porcine proliferative enteropathy. They can be administered as recombinant polypeptides or expressed as recombinant vaccines utilising

RESULT 4

Pseudomonas aeruginosa polypeptide #2955.

Bacterial infection; Pseudomonas aeruginosa infection; antibacterial.

Pseudomonas aeruginosa JS6551795-B1.

WPI; 2003-615309/58. N-PSDB; ABD04351.

Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.

Disclosure; SEQ ID NO 19526; 455pp; English

The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostice, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The

```

```
Identifying compound capable of modulating biofilm formation by bacteria/bacterial antibiotic resistance, useful for treatment of biofilm associated disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16;
                                                                                                                                                                                                                                                                                                                                                           The invention comprises a method for identifying a compound capable of modulating biofilm. Formation by bacteria. The method of the invention is useful for identifying a compound capable of modulating biofilm formation by bacteria or modulating bacterial antibiotic resistance. The method of the invention is also useful for diagnosing and treating a subject (especially an immunocompromised human) that is affilicted with a biofilm associated disease or disorder, such as: cystic fibrosis; AIDS; middle as infections, anchy periodonical disease, catheter-associated infections and medical device-associated infections. The present amino acid sequence represents a protein that is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                168
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              216

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. Zyskind JW; Xu HH; Ohlsen KL, Forsyth RA, Haselbeck R, Yamamoto R, Malone C, Carr GJ, Zamudio C, Trawick JD, 2003-029926/02 N-PSDB; ACA26709

Claim 25; SEQ ID NO 50763; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an host cell containing the vector; (3) an isolated polypeptide; (5) producing the polypeptide of its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, or that the inhibits cellular proliferation; (8) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation of an order required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies cor a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of surfaction of an organism. The antisense nucleic acids are useful for strains; or (13) identifying the target of a compound that inhibits the confictiving proteins or screening for homologous nucleic acids required for proliferation in cells other than S: aureus, S. typhimurium, confirting proliferation in cells other than S: aureus, S. typhimurium or present aid not form when act of the printed specification, but was obtained confirm electronic format directly from WIPO at the sequences.

```
The present sequence represents an Bscherichia coli iron transport and metabolism protein. Also described: (1) an isolated and purified polynucleotide comprising a nucleic acid sequence encoding an Escherichia coli iron transport and metabolism protein, and (2) an expression cassette comprising a nucleic acid sequence encoding a promoter operably linked to at least one of the polynucleotide sequences of (1). The Escherichia coli iron transport and metabolism proteins have antibacterial activity. The methods and compositions of the present invention are useful in identifying genes and proteins involved in bacterial iron transport and metabolism, and using such as potential targets for agents against pathogenic bacteria.
                                                                                                                                                                                                                             Length 402;

```
The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see AbA00041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein expressed from the genome sequence of the present invention. Proteins cartibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of vitamin ST. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related organisms. Note: The sequence data for this in a leterance of the printed specification, but was obtained in a leterance of the printed specification, but was obtained in a leterance of the printed specification, but was obtained in a leterance of the printed specification, but was obtained the printed specification, but was obtained to the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Genomic sequence for Listeria monocytogenes, useful e.g. for treatment and prevention of Listeria and related bacterial infections, and related polypeptides.
                                                                                                                                                                                                                 Dehoux P;

FlgE polypeptide is used in a claimed vaccine, which further comprises an adjuvant (a pharmaceutically acceptable form of cholera toxin), and which is used therapeutically as a prophylactic vaccine in mammals (especially humans) infected by H. pylori. It is additionally used to form a composition in the treatment and diagnosis of H. pylori infection, and in eliciting a protective immune response towards both the coccidal and imporpatite elicits an immune response towards both the coccidal and bacillary forms of H. pylori, and also increases protective immune mechanisms locally in the stomach, which is important because systemic immunity only plays a limited role in protection against mucosal 473 323 AVATFSNEDGLVKMGNGEYVPGLSSGDAVYGVAGQNGAGGISGSSLEGSNVDLSREFVNL 382 PLARFTSEDGLRREGNNHYSATLDSGGPEFGLPGTSNYGKLSVNQLETSNVDMSREMVNM SMMPIQTSSGNSTARNGSSSTRRYSQDGYPQGDLVDVTITSEGKLQGKYSNSQVVDFYNI NY-------GINQVFSPISDGKGAAIVKDYAVIDSGYIAVSYSDGIVIPVAQL Ø New Helicobacter pylori FlgE polypeptide - useful for inducing protective immune response to H. pylori infection. The invention relates to new Proteus mirabilis polypeptides and polymcleotides. The invention also relates to antibodies against the polypeptides, an method a method for producing the polypeptides, an method of producing the polypeptides, and method for evaluating a compound for the ability to bind a P. mirabilis, and polypeptide and method for screening test compounds for anti-bacterial activity. The polypeptides and polymucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial diagnos or as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.
                                                                                         New Proteus mirabilis polypeptides and polynucleotides, useful as reagents for diagnosis of bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as

ABM68268 standard; protein; 405 AA

RESULT 11 ABM68268

```
The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms, for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polymorphisms, for gene analysis and for detection/identification of the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter ceponse or sensitivity to toxins and antibiotics produced by P. ceponse or sensitivity to toxins and antibiotics produced by P. ceponse or sensitivity to toxins of the gross are useful for recombinant production of the proteins, particularly toxins and artibacterials useful as insecticides, bactericides and fungicides. The genes in place of the genes and Ab are also useful that are sensitive to P. luminescens and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               128

                                                                                                                                                                                                                                                                                                                                                                                                              supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in disgnostics, forersics, gene mapping, identification of mutations are responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

RESULT 14 ABM68266 g ò The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant or production of P. aeruginosa derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using blochip technology. Sequences ABO67826-ABO84136 represent P aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed 11; 148 160 Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection. 113 ------ 148 353 413 QTADFINPAGLQAIGNNLFLETGSSGAPQVGTPGLNGLGTVAQNTLENSNVNVVEELVNM 241 114 RFTQDGFLNDPSGFTLMGSRISNNPNIKKETLEPIQLDFNDPTYAKSPAKTSTALNAVVN 173 234 PSSTGSKTFEYLVAMNPSEDGSAASGTDSAGLLMSGTWTFSSNGELKNMTAFTPTGSATK 293 414 PLARFTSEDGLRREGNNHYSATLDSGGPEFGLPGTSNYGKLSVNQLETSNVDMSREMVNM 473 1 MMGSLFIGATGMKTHSTGLGTVSNNIANANTIGYKQQQVVFQDLFSQDLAIGSTGSQGFN 60 61 QAGMGAQVGS-VRIIFIQGAFEPGNSVT----DLAIGGKGFFQVTLED-KVHYTRAGNF 69 ELPSGLÓLGTGVRVVGTÓKIFTPGSLQTTEQPLDMAVNGRGFFQVLLPDGTVSYTRDGSF 174 LGDSTDKTQSEANPYFALLESWKGNGTPPISTSNYSYAQPWRVYDQQGNSHDITVYFDGA 294 DINAWQPAPLVNGLPQFSANFVGAGIQPLTLDFGIKSQQNMWAGAPASAAAIGTDIGKLP 354 SMMPIQTSSGNSTARNGSSSTRRYSQDGYPQGDLVDVTITSEGKLQGKYSNSQVVDFYNI Gaps 93; Indels 254; ; Score 307; DB 7; Length 269; Pred. ```
The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/demplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. Luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes proteins, vectors containing the genes and Ab are also useful the are sensitive to P. luminescens and the proteins are as virulence the properticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. Luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MMGSLFIGATGMKTHSTGLGTVSNNIANANTIGYKOOOVVFODLFSQDL----AIGSTGS 56

pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (Arcc 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts

                                                                                                                                                                                                                                                                          The present sequence is a Helicobacter pylori flagella associated protein, which was found to be homologous to flagellar basal body rod protein following BLAST protein analysis. H. Pylori has been strongly inked to chronic gastrifts and duodenal ulcer disease. The nucleic acid sequences of the invention are used to evaluate compounds, especially activators or inhibitors of bacterial life cycle, for the ability to bind an H. Pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are also useful for generating vaccines for immunising subjects against H. Pylori or for use in detecting the presence of Helicobacter species in a sample. Antisense nucleic acid sequences of these sequences are used to inhibit expression of a gene presence of Helicobacter species in a sample. Antisense nucleic acid sequences of these sequences are used to inhibit expression of a gene from Helicobacter species. H. Pylori whole genomic DNA was isolated and nebulised to a median size of 2000 bp. Purified DNA ragments were bluntended and ligated to unique BexXI-linker adapters in 100-1000 fold molar excess. These linkers are complementary to the BsxXI-cut pMpX vectors; while the overhang is not self-complementary. Therefore the linkers will not concatemerise nor will the cut vector re-ligate itself easily. The linker-adapter inserts were ligated to each of the 20 pMpX vectors to construct as series of shotgun subclone libraries. The purified DNA samples were then sequenced Note: The ORF/protein reference number for this sequence was obtained from the related specification, W09640893
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 113

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a Helicobacter pylori flagella-associated membrane protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by medanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified

polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polynucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial days or as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6 MIRSLWIAKTGLDAQQTNMDVISNNLANVSTNGFKRQRAVFEDLLYQTIRQPGAMTSEQT 65

producible by a transformed host recombinant basal body for protein (1) producible by a transformed host containing an expression vector.

Comprising a nucleic acid selected from; (a) an entire nucleic acid sequence of 1800 base pairs (bp), or the nucleic acid sequence of the protein of 1800 base pairs (bp), and the specification; (b) a nucleic acid sequence of the amino acid sequence of the FlgF protein, a 270 residue sequence, given in the specification; (c) a nucleic acid sequence encoding a functional FlgF basal body rod protein of a flagellum of a strain of Campylobacter; or (d) an immunogenic fragment of an FlgF protein of (a), (b) or (c), and expression means operatively coupled to the nucleic acid molecule for expression by the host of a basal body rod protein of a flagellum of a strain of Campylobacter. (I) is useful in immunological vaccine compositions for in vivo administration to protect of menunological vaccine compositions for in vivo administration protect computations and pathogens that produce basal body rod protein and/or peptide antibodies. The product of the invention has immunostimulatory activity. This sequence of the invention has immunostimulatory activity.
                                                                                                                                                                                                                                                                               Recombinant basal body rod protein producible by a transformed host for use in immunological vaccine compositions for in vivo administration to protect against diseases caused by bacterial pathogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                          invention describes a novel recombinant basal body rod protein (I)
                                                                                                                                                                                                                                                                                                                                                                                         Example 1; Col 23-26; 28pp; English

This sequence represents the Campylobacter figg protein, encoded by the figfs operon of the invention. The figF and figg proteins are basal body rod proteins of the fiagellum of the Campylobacter. The figfs operon and host cells containing it, are useful for the recombinant production of Campylobacter, especially C. jejuni, basal body rod proteins. This bacterium is the cause of secretory diarrhoea and enterties. As such, the peptides produced can be used to raise antibodies, which in turn can be used to detect the presence of the organism diagnosis of the conditions. Additionally, the peptides, and specifically the live vectors (e.g. poxor vaccinia virus) can be used as vaccines against the bacterium, and the antibodies can be used for passive immunisation. The nucleic acids can also be used to detect the presence of the bacterium . 1 MMGSLFIGATGMKTHSTGLGTVSNNIANANTIGYKQQQVVFQDLFSQDLAIGSTGSQGPN Indels 253; Length 263; 8.6%; Score 223.5; DB 2; 19.3%; Pred. The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target

components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-860848. Fepresent P. aeruginosa polypepitides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.
                                                                                                                                                                                                    22;

The invention relates to the recombinant production of Haemophilus influenzae high molecular weight (HMW) proteins in Escherichia coli. The expression construct used to effect recombinant expression comprises a promoter functional in E. coli (e.g., the T7 promoter) operably Hinked to a modified hmwABC operon from a non-typeable (non-encapsulated) H. colificaters termed hmwABC and hmwABC percent woo hmw gene clusters termed hmwABC and hmwABC each hmwABC operan comprises hmwA, hmw and hmwC genes. The hmwA genes encode the structural HMMA proteins and thmwC genes encode accessory proteins which are responsible for post-translational processing and secretion of the HMWA proteins. The modified hmwABC operon used in the expression construct of the invention contains an A gene modified such that it encodes only the mature HMMA. The invention also discloses hmwA genes (AAAS2175-AS2198) and HMWA proteins (AAB01824-B01849) from the non-typeable H. influenzae strains Joyc, XI, XI, LCDC2, PMHI, 15 and 12. The uncleic acids and vectors are used for the production of recombinant H. influenzae HMW proteins which can be used as vaccines to mediate a humoral or cell-conditions which can be used as vaccines to mediate a humoral or cell-condition and close the mediate and the mediate and close hww genes from other non-typeable can be used to isolate and clone hww genes from other non-typeable strain of H. represents a mature HMWA protein reactions. The present sequence represents a mature HMWA protein reactions. The present sequence represents and our substitution of the present sequence. (Updated on 12-SEP-2003 to standardise of field)
                                                                                                                                                                                                                                                                            Nucleic acid molecule for producing recombinant high molecular weight proteins of Haemophilus which are used as a vaccine to provide protection against Haemophilus induced diseases in humans.

These epitopes can then be synthesised using standard techniques and incorporated into fully synthetic or recombinant vaccines. (Updated on 25-MAR-2003 to correct field.)

synthesised using standard techniques and incorporated into fully synthetic or recombinant vaccines. This sequence is claimed to be the same as that given in AAR41723 (High molecular weight protein 1) although it does differ slightly. (Repeated regions which are possibly incorrect and occur in the corresponding nucleotide coding sequence contribute to these differences). (Updated on 25-MAR-2003 to correct PN field.)

The HMM1 protein encoded by this sequence is useful in a vaccine to protect against disease caused by non-typeable Haemophilus which are not controlled by H. influenzae type b (Hib) vaccines. The encoded protein can also be used as a carrier for protective Hib polysaccharide (in a conjugate vaccin against meningitis) or for other antigens, haptens, etc. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                            New immunogenic high mol. wt. proteins of non typeable Haemophilus

Klein MH; × Yang Loosmore SM,

Nucleic acid molecule for producing recombinant high molecular weight proteins of Haemophilus which are used as a vaccine to provide protection against Haemophilus induced diseases in humans. 2000-303789/26. N-PSDB; AAA52195

Example 16; Fig 28A-Q; 307pp; English.

The invention relates to the recombinant production of Haemophilus

influenzee high molecular weight (HWW) proteins in Escherichia coli. The

expression construct used to effect recombinant expression comprises a

promoter functional in E. coli (e.g., the T7 promoter) operably linked to

a modified humABC operon from a non-typeable (non-encapsulated) H.

colusters termed hum1ABC and hum2ABC. Each humABC operan comprises humA,

colusters termed hum1ABC and hum2ABC. Each humABC operan comprises humA,

colusters termed hum1ABC and hum2ABC. Each humABC operan comprises humA,

colusters termed hum2ABC and hum2ABC. Each humABC operan comprises humA,

colusters termed hum4ABC operan used the structural HMMA proteins

condition and humABC operan used in the expression construct of

the invention contains an A gene modified such that it encodes only the

condition also discloses humA genes (AAAS2175-AS2199)

and HMMA proteins (AAB01824-B01849) from the non-typeable H. influenzae

the invention contains also discloses humA genes (AAAS2175-AS2199)

and HMMA proteins (AAB01824-B01849) from the non-typeable H. influenzae HMM

conteins which can be used as vaccines to mediate a humoral or cell
conteins which can be used as vaccines to mediate a humoral or cell
conteins which can be used as vaccines to mediate a humoral or cell
conteins which can be used as vaccines to mediate a humoral or cell
conteins which can be used as vaccines to mediate a humoral or cell
conteins which can be used as vaccines to mediate a humoral or cell
conditions by H. influenzae (e.g., otitis media, epiglottitis, pneumonia and

tracheobronchitis). The HMM proteins are also useful as antigens in

immunoassays for detecting antibodies against Heamophilus, HMM proteins

can be used to isolate and clone hum genes from other non-typeable

cracked by H. influenze and clone hum genes from other hym proteins

can be used to isolate and clone hum genes from the ron-typeable

cracked by H. influence and clone hum genes from the present sequence

Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antisense; prokaryotic essential gene; cell proliferation; drug design

This protein comprises the high molecular weight surface protein HWW1 (125 kDa) of non-typeable Haemophilus influenzae strain 12 that has the immunological ability to protect against disease caused by a non-typeable Haemophilus strain and is characterised by at least one surface-exposed B cell epitope that is recognised by monoclonal antibody AD6. The HWW1 and AAT90996). The expressed protein is truncated, starting at residue 42 of the full-length gene product. HWW2 (see AAW30294), HWM3 (see AAW30291) and HWW4 (see AAW30292) have also been identified. A conjugate comprising HWM1 linked to an antigen, hapten or polysaccharide, and a synthetic peptide of 6-150 amino acids corresponding to at least protective epitope of HWM1 are also claimed. HWW proteins, conjugates and be used in vaccines, as immunogens for preparation of antibodies and as antigens for detection of these antibodies. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                      Non-typeable Haemophilus; high molecular weight surface protein; HMW1, hmw1A gene; immunogen; vaccine; otitis media.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    High molecular weight proteins of non-typeable Haemophilus influenzae useful for vaccine production.

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated oplypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, (7) identifying a compound that influences the activity of dentifying a gene required for cellular proliferation; (8) identifying a gene required for cellular proliferation of the test compound that inhibits proliferation of an organism acts; (8) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene proliferation of an organism acts; (13) identifying the target of a compound that inhibits the proliferation of an organism of an organism or capable of the strains is present in a culture or collection of a complexity of proliferation of an organism. The antisense nucleic acids required for cellular proliferation to solve the capable of the strains or screening for homologous nucleic acids required for cellular proliferation to solve the capable of the capable or and capable or activity or action of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig.wipo.int/pub/published_pct_sequences

The present invention relates to a method of identifying a compound capable of altering the sensitivity of a microorganism to an antimicrobial agent by employing efflux pumps comprising polypeptides concoded by the following genes: PA1874, PA4142, PA2389, PA1876, PA4143, PA2390 or PA1163. The method is useful for identifying modulators of microbial resistance of an organism in a biofilm. The methods are also useful for identifying genes that encode proteins that play a role in biofilm resistance. The method is particularly useful for screening compounds or discovering compositions that will inhibit biofilm formation and overcome their resistance mechanisms. These methods are particularly useful in medical, industrial or natural settings, where formation of biofilms can have serious negative consequences and result in high costs both in human health and economic terms. The present sequence is a protein shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying modulators of microbial resistance of organisms in biofilms, e.g. inhibitor of biofilm formation, by employing expression controls, or efflux pumps containing polypeptides, of genes associated with biofilm resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match 6.4%; Score 166; DB 6; Length 2468; Best Local Similarity 21.9%; Pred. mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. Pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. Pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts
                                                                                                                                                                                                                                                                                                                                                            500

A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterohaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the
                                                                                                                                                                                                                                                                                                                      62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Enterohemorragic Escherichia coli 0157:H7-specific nucleic acid molecule and a polypeptide and its use, a polypeptide, a vector and a host cell.

This sequence is a H. pylori flagella-associated protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to indentify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by

                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the protein sequence of bacterial immunoglobulin-
like Leptospira protein 2 (BigL2) from Leptospira kirschneri. BigL2 has a molecular weight of 205,000 and comprises 12 tandem repeat sequences of approximately 90 amino acids, with a large C-terminal domain. The repeat regions show over 90% sequence homology to the repeat sequences of other resolated leptospiral Big proteins, BigL1 ADF83254 and BigL3 polypeptides from recombinant or native antigen preparations are immunogenic, inducing an immune response against pathogenic spirochaetes. The invention provides BigL1, BigL2 and BigL3 polypeptides useful in diagnostic, therapeutic and vaccine applications, especially for the diagnostic, therapeutic and vaccine applications, especially for the diagnostic and prevention of infection with Leptospira species in medical and veterinary applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             89
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        49
                                                                                                                                                                      New Bacterial Immunoglobulin-like (Big) polypeptides and nucleic acids, useful as vaccines or for diagnosing, preventing or treating infection diseases caused by Spirochetes e.g. Treponema, Borellia or Leptospira.

                         invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also bused for the production of antibodies. The products can also be used forter and diagnosis

The invention relates to an isolated nucleic acid comprising any one of
the 6213 antisense sequences given in the specification where expression
of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid
conclude a polypeptide whose expression is inhibited by the antisense
conclude acid; (2) a host cell containing the vector; (3) an isolated
polypeptide or its fragment whose expression is inhibited by the
antisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (7) identifying a gene polypeptide; (6) inhibiting cellular
contisense nucleic acidity; (1) aciditication or the biological
contisense nucleic acidity; (1) antibody cellular proliferation of an
congound's acitivity; (1) antibody cellular proliferation of an
congound's acitivity; (1) antibody cellular proliferation of an
congound's acitivity; (1) antibody cellular proliferation of
compound's acitivity; (1) antibody cellular proliferation of
congounds; or (3) identifying the target of a compound that inhibits the
confounds; or (13) identifying the target of a compound that inhibits or collection of
conditises or acreening for homologous nucleic acids are useful for
confound a cillular proliferation or solate candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         25;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aerucinosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               596
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     187

ABU21223 standard; protein; 3073 AA

Protein encoded by Prokaryotic essential gene #6750.

Antisense; prokaryotic essential gene; cell proliferation; drug design.

Zyskind JW; Xu HH; 耳罩 Ohlsen I Forsyth I а, Haselbeck R, Yamamoto R, Malone C, Carr GJ,

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 49147; 1766pp; English.

38

RESULT

the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound, a activity; (11) a culture compising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or owhich each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational detrifying proteins or for screening homologous nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryoric essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at first province and province and province and province and province and province of the printed specification, but was obtained in electronic format directly from WIPO at 2328 2439 2388 2214 2274 2614 2674 255 ---AASGTD----SAGLL-----MSGTMTFSSNGELKNMTAFTP--TGSATKDLNAWQ 299 2675 KTYNSVATTMDALNAKIAT-GSTDGVVYDTSAHNKLTL--GGVNATTPVTVANVAAATSD 2731 161 201 400 450 S---TGSQGPNQAGMGAQVGSVR-TIFTQGAFEPGNSVTDLAIG----GKGFFQVTLEDK 104 : | : | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | | : | : | | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : | : 2389 TPVKVŠN------VANGVANNDAVNVAQLTAMGGTINSSGVVTNSF-VAYDDTTKGSI 4 SLFIGAT-----GMKTHSTGLGTVS-NNIANANTIGYKQQQVVFQDLFSQD----LAIG 2164 SLLEGAVPVTNYIAVSQNVTGGGSTSASNDLNAMAIG------PLAAASGVGALAVG 2215 AGSIAGSDASTAVGTGAAVGSVNSTAIGYSASVGVNSANSLAIGYNSRAQALNSLAIGTE 105 VHYTRAGNFRFTQDGFLNDPSGFTLMGSRISNNPNIKKETLEPIQLDFN---DPTVAKSP 2275 ASATSAGSIAIGYGAFLN-PSATNSMALGL----NSSVSAANAVAIGYNAVADRANÀVS-2555 GAVGAERQIINVANATNSTDAVNLSQLQAMGANVNSSGVVTNAFVAYDDSTKGKVTLGGV KYSNS--QWDFYNI PLARFTSEDGLRREGNNHYSATLDSGGPEFGLP-----GTSN 162 AKTSTALNAVVNLGDSTDKTQS-EANPYFALLESWKGNGTP-------2497 -- NIVNGGGIKYFHANSTLADSSATGTDSVAIGGAANATAANSVALGANSVAGRANAVSV PSMMPI-----QTSSGNSTARNGSSSTRRYSQDGYPQGDLVDV----TITSEGKLQG 202 -PISTSNYSYAQPMRVYDQQGNSHDITV----YFDGAPSSTGSKTFEYLVAMNPSEDGS-6.1%; Score 156.5; DB 6; Length 3073; 22.2%; Pred. This sequence represents the Campylobacter figF protein, encoded by the figFG operon of the invention. The figF and figG proteins are basal body rod proteins of the flagellum of the Campylobacter. The figFG operon and host cells containing it, are useful for the recombinant production of Campylobacter, especially C. jejuni, basal body rod proteins. This bacterium is the cause of secretory diarrhoea and enteritis. As such, the peptides produced can be used to raise antibodies, which in turn can be used to detect the presence of the organism diagnosis of the conditions. Additionally, the peptides, and specifically the live vectors (e.g. poxor vaccinia virus) can be used as vaccines against the bacterium, and the antibodies can be used for passive immunisation. The nucleic acids can also be used to detect the presence of the bacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA encoding Campylobacter flagellum basal body rod proteins - useful for recombinant production of the proteins for use as vaccines against the bacterium, and for its detection, additionally with antibodies raised

This invention describes a novel recombinant basal body rod protein (I) producible by a transformed host containing an expression vector comprising a nucleic acid selected from, (a) an entire nucleic acid sequence of 1800 base pairs (bp), for the nucleic acid sequence of the FigF gene having 810 bp, both given in the specification, (b) a nucleic acid encoding the amino acid sequence of the FigF protein, a 270 residue sequence, given in the specification; (c) a nucleic acid sequence of the figF protein, a 270 residue encoding a functional FigF basal body rod protein of a flaggellum of a strain of Campylobacter; or (d) an immunogenic fragment of an FigF protein of a caid molecule for expression means operatively coupled to protein of a flaggellum of a strain of Campylobacter. (I) is useful in immunological vaccine compositions for in vivo administration to protect against diseases caused by bacterial pathogens that produce basal body rod proteins. (I) are also useful as immunogens, as antigens in immunossays, or for procedures for the detection of antibacterial, campylobacter, basal body rod product of the invention has immunostimulatory activity. This sequence for the invention has immunostimulatory activity. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       54 --TGSQGPNQAGMG-AQVGSVRIIFTQGAFEPGNSVTDLAIGGKGFFQV--TLEDKVHYT 108

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid enoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation or the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, sactivity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of proliferation of an organism. The antisense nucleic acids are useful for cidentifying proteins or serventing for homological acids required for a compound that inhibits the configuration of an organism or required for antisense nucleic acids required for a configured for a compound that inhibits the configuration of an organism or required for antisense nucleic acids are useful for a configuration of an organism or remaining the remaining for rational action of an organism or remaining for parallement of a compound that inhibits the configuration of an organism or remaining for parallement of a compound that inhibits and the configuration or an organism and the confi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
                                                                                                                                                                                   Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
